

THE NATIONAL INSTITUTE FOR SUSTAINABLE DEVELOPMENT

P.O BOX 28-BANGEM BUEA

Key Relevant activities linked to the Doha Programme of Action – January 2023- September 2026 in point format

*Investing in people and eradicating poverty: The National Institute for Sustainable Development have been delivering direct support to populations living in extreme poverty in the extreme north and North West regions of Cameroon since 2023. In 2024, 2025, and 2026, our programs have covered areas such as enrolment of pupils and provision of books, provision of free schools meals to children from poor backgrounds, support to women by providing them family packaged food including through food stockholding mechanisms, medical coverage for the poorest of the poor and the poor and disabled, supported vocational and technical education. Our programs of support and upgrading health and education is our own contribution in investing in human capital and building the needed resilience.

We have also improved the health care accessibility and affordability of extreme poor families by providing a quarterly dosage of malaria, cough, vitamins and other essential medications to families. As of 2024 till date, we have registered 123 poor families for access to health care information and supportive mechanisms in our programs and we have in place their medicals care coverage by our organisation each time they get hospitalised for malaria, typhoid, yellow fever, water borne diseases such as dysentery and also accidents.

*Addressing Climate and environmental degradation, Resilience: The National Institute for Sustainable Development has been at the forefront of resilience and the fight against environmental degradation. Our resilience building mechanisms and the scaling up of our combat readiness to fight land degradation and desertification, fighting biodiversity loss in the east region of the country and putting in place our technical teams to always support the vulnerable population is at the heart of our duties.

We ensured that adults have access to education especially women who didn't have access to early education. Our vocational skills training and acquisition program which we fund and support with technical teams in fields as baking, sewing, soap making and computer literacy train adult women to acquire those skills.

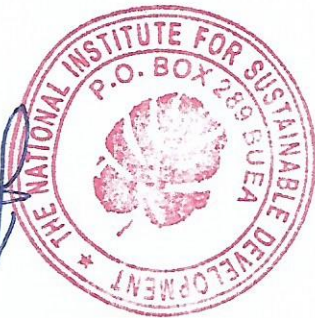

1. We provided vocational training to equip individuals with skills and knowledge needed for employment or self employment. We renovated the technical and vocational college in Isangele and provided computers for digital learning and connectivity among the vocational schools in Isangele subdivision. As of October 2026, our program of school renovation and

vocational college support has gone to eleven vocational colleges in the North West, East, West and South West regions especially the vocational college in bafut, Akono, Nyasoso and Miselele communities.

2. We also provided basic healthcare access to essential healthcare services such as vaccinations, maternal and infant health and disease prevention campaigns. This has prevented communicable and non communicable diseases and improved maternal and child health. We have upgraded the health centres and aid posts in Mora, Yagoua and Mambu in Bafut. This was one of our key accomplishments in 2025. Our support for the health system and aid posts in those remote areas helped in financial risk protection for poor facilities that don't have adequate finances in case of accessing medical services.
3. Providing support to vulnerable individuals and families through provision of food and other support programs.
4. Empowering women and girls by ensuring they have equal access to education, healthcare and economic opportunities. We have provided scholarships to girls who show progress in class as a means of boosting school enrolment.
5. Ensuring that people with disabilities, ethnic minorities and other vulnerable groups are included in developmental efforts especially in the educational sector. We provided assistance to the blind centre in Menji especially gigantic materials in 2025. This is a way of making sure those with disabilities are not left behind when it comes to education.
6. Healthy children attend schools. Thus our school meal program which started in 2024 and has continued till date has helped to boost the nutrition intake of children in school from poor homes who can't have food before coming to school. Our school program covers schools in the Mbonge, Tinto, Nguti and Wum communities. As of October 2026, we provide school meals to 2045 primary school children from class one to five in Wum, Mbonge, Tinto, Nguti and Wum.

Director of programs

Computer and IT Training course at one of our sponsored vocational training centres

Training Programs offered

- Renewable Energy
- App Development
- Web Development
- Smart Agriculture
- Fashion Designing

REGISTRATION IS ONGOING
