

THE NATIONAL INSTITUTE FOR SUSTAINABLE DEVELOPMENT

03/Feb/2025

P.O BOX 28-BANGEM BUEA

Relevant activities – 2022-2024 in point format

1. Sensitization campaigns for development schemes and financial sourcing to keep our activities afloat, so that we can raise resources and implement our projects. We also receive donations and gifts from informal groups and individuals which has also helped to keep our finances going.
2. Cleaning of the Ekondo titi beach and nearby coastal areas from plastics and other harmful garbage. A total volunteer number of 45 persons were present to clean the beach. This is imperative because the garbage disposal on the beach has led to it being unsustainable with wildlife being under threat and many marine like and rare species having disappeared from on sight of the beach.
3. We also have a master budget which consolidates all the individual budgets of our organisation into one comprehensive budget plan which includes our operating budget, capital budget, cash budget and other related budgets
4. Sensitization of the local barondo tribe residing along the beach area on the disadvantages of emptying their waste in the oceans. Advising them to stop using plastic bags which mostly end up being deposited at the ocean. One of the major problems here has been disposal of plastic bags into the communities coastal area which has been a major cause of ocean pollution
5. Provision of waste bins to coastal communities and the provision of 100 recycling waste bins for use by coastal communities. Organising clean ups and providing alternative recycling bags to locals which has made them to stop using plastic bags.
6. Construction of 70 modern toilets for use by the indigenous coastal villagers. This has been really a breakthrough solution as villagers used to defecate on the shores of the ocean as they didn't have toilets for their community.
7. Provision of soya beans seeds to local population to have other sources of proteins so as to reduce the over fishing along the coastal beaches of Ekondo titi and idenau sea areas.
8. Setting up of the beach cleaning committee made up local population to clean the beaches and monitor and stop waste dumping in the ocean along the Debundscha beach zone.
9. Setting up of bore holes to provide drinking and washing water so that local streams which empty into the oceans and nearby should not be polluted.
