

THE NATIONAL INSTITUTE FOR SUSTAINABLE DEVELOPMENT

P.O BOX 289-BANGEM BUEA

CAMEROON

Proof of Environmental activities in Cameroon 2022-2025 in point format

1. Cleaning of the Ekondo titi beach and nearby coastal areas from plastics and other harmful garbage. A total volunteer number of 45 persons were present to clean the beach. This is imperative because the garbage disposal on the beach has led to it being unsustainable with wildlife being under threat and many marine like and rare species having disappeared from on sight of the beach.
2. Waste reduction and recycling as we provided more that 3000 eco friendly market reusable bags to replace plastic bags mostly used by locals in the ndian division of Cameroon.
3. Sensitized and eliminated single use plastics by providing reusable water bottles, coffee cups and straws to prevent plastic pollution in the oceans.
4. Organised workshops on composting food scraps and yard trimmings to reduce landfill waste and create nutrient rich soils for agriculture in the villages of bangem and tombel.
5. Sensitization of the local barondo tribe residing along the beach area on the disadvantages of emptying their waste in the oceans.
6. Provision of waste bins to coastal communities and the provision of 100 recycling waste bins for use by coastal communities. Organising clean ups and providing alternative recycling bags to locals which has made them to stop using plastic bags.
7. Construction of 70 modern toilets for use by the indigenous coastal villagers. This has been really a breakthrough solution as villagers used to defecate on the shores of the ocean as they didn't have toilets for their community.
8. Provision of native soya beans seeds to local population to grow them and other trees to support local wildlife and pollinators. To also boast other sources of proteins so as to reduce the over fishing along the coastal beaches of Ekondo titi and idenau sea areas.
9. Setting up of the beach cleaning committee made up local population to clean the beaches and monitor and stop waste dumping in the ocean along the Debundscha beach zone.
10. Setting up of bore holes to provide drinking and washing water so that local streams which empty into the oceans and nearby should not be polluted.
11. Planting more than 400 trees in the village of Mbonge and Isangele to replace the forest that has been cut down and used as firewood by villagers
